

## CONCLUSIONS

Strategies identified for the Revitalization Scenario will lead to a 60% reduction of potable water use.

### WATER SOURCE EXISTING

### REVITALIZATION

### WATER USE

194 million gallons/yr

86 million gallons/yr

### WASTE WATER

194 million gallons/yr

67 million gallons/yr

## BEST PRACTICES

### WATER

The Hoffman Madison Waterfront development, soon to be under construction in SW Washington DC, will have an elaborate 675,000 gallon cistern system that will be constructed to capture more than 25 million gallons of runoff each year that currently drains into the Washington Channel due to the lack of permeable surfaces. The captured runoff will be recycled to the greatest extent possible, including the provision of chilled water for the development's cogeneration plant.
