Link Downtown with the National Mall

THE FEDERAL TRIANGLE

Situated between the National Mall and Washington’s traditional downtown, Pennsylvania Avenue and the Federal Triangle offer a unique opportunity to integrate diverse aspects of Washington life. By featuring a mix of activities and engaging public spaces, the Federal Triangle can increase its appeal to workers and visitors, and Pennsylvania Avenue can strengthen its role as America’s preeminent ceremonial boulevard.

This distinguished precinct should exhibit the purpose of the federal government, America’s diverse national heritage, and the best of American art, architecture, landscape architecture, and urban design. It should have attractive and animated city streets and public spaces; welcoming public buildings; flexible and convenient public transit service; sustainable and accessible streets and buildings; and federal, local, and private development.

The Monumental Core Framework Plan recommends establishing a new destination midway along Pennsylvania Avenue and improving the public space along the avenue as well as throughout the Federal Triangle to link the National Mall with downtown Washington.
Context

Pennsylvania Avenue provides a symbolic, physical, and visual link between the executive and legislative branches of government. The avenue originally was one of the city’s main commercial streets, and by the middle of the 19th century, saloons and brothels operated alongside hotels, banks, and shops, making it one of the liveliest streets in the nation, though somewhat disreputable.

The completion of the Romanesque Post Office Building in 1899 signaled a change of fortune for the neighborhood. Not long afterward, the McMillan Commission recommended that a 70-acre triangle containing 23 city blocks south of Pennsylvania Avenue be consolidated and set aside for government office buildings. In 1926, construction began on the massive Beaux-Arts buildings of the Federal Triangle to house the growing federal workforce. The scale and detail of the buildings’ architecture reflect “the dignity, enterprise, vigor, and stability of the Federal government,” as noted later by Senator Daniel Patrick Moynihan. The Federal Triangle includes a delightful series of courtyards and intimate spaces that contain an impressive collection of 20th-century sculpture.

Pennsylvania Avenue is a key element and contributing resource to the historic L’Enfant Plan, and the buildings in the Federal Triangle comprise part of the Pennsylvania Avenue National Historic Site. By the 1960s, the area north of Pennsylvania Avenue was in decline, losing much of its retail and private commercial activity. Its condition did not represent the grand symbolic avenue originally intended by L’Enfant. In 1972 the Pennsylvania Avenue Development Corporation (PADC) was formed to rejuvenate the area between 3rd and 15th Streets. The streetscape was improved and mixed-use development was added over the following 25 years.

The federal government maintains a dominant presence in the Federal Triangle with more than 16 million square feet of office space, several federal agency headquarters, and more than 33,000 employees. While the unified precinct is grand, ordered, and architecturally successful, the superblocks and predominately single-use office buildings isolate the National Mall from the downtown north of Pennsylvania Avenue. Outside of office hours the Federal Triangle appears lifeless, with deserted streets between downtown and the National Mall. Even during the day, the Federal Triangle can only be experienced from its edges as opposed to within. The government buildings are mostly closed to the public and east-west passage through the Triangle is restricted. Numerous attractive courtyards, arcades, and interior atriums are cordoned off by security barriers and checkpoints, with many of the spaces used only for parking and loading operations.

Throughout the precinct, poorly landscaped building yards and the absence of a clear wayfinding system create a monotonous public realm and the parks, plazas, and commemorative spaces along Pennsylvania Avenue are showing their age. Additionally, because the Federal Triangle was built over tributaries of Tiber Creek and has a high water table, a large percentage of impervious area, and antiquated and overtaxed city sewers, the area is highly susceptible to flooding.

North of Pennsylvania Avenue, the FBI’s security requirements have prevented street-level public uses around the entire block of the J. Edgar Hoover Building between 9th and 10th Streets. The building’s fortress-like presence is exacerbated by security installations, the moat that surrounds three sides of the building, the scale of its architectural features, and the absence of street-level activity.

Several recently completed or planned projects will help integrate downtown, the Federal Triangle, and the monumental core. These include the Newseum on Pennsylvania Avenue, the recently renovated National Museum of American History on Constitution Avenue, the proposed National Museum of African American History and Culture on Constitution Avenue between 14th and 15th Streets, and the proposed relocation of the National Aquarium within the Department of Commerce building from 14th Street to Constitution Avenue. Additionally, Congress recently passed legislation to reuse the Old Post Office (OPO) building and adjacent glass pavilion Annex to increase public access and use.

Key Improvements

A. Establish New Destinations on Pennsylvania Avenue by concentrating a mix of office, culture, and hotel uses on Pennsylvania Avenue between 9th and 12th Streets, NW.

B. Enhance the Public Realm by establishing a welcoming, interconnected system of lively and beautiful streets, introducing sustainable public spaces, and improving the pedestrian experience and symbolic importance of Pennsylvania Avenue and the Federal Triangle.

The Framework Plan proposal for Pennsylvania Avenue and the Federal Triangle.
Establish New Destinations on Pennsylvania Avenue

North of Pennsylvania Avenue is the Penn Quarter, a vibrant live/work neighborhood and visitor destination. South of Constitution Avenue is the National Mall, the civic heart of the nation’s capital and the most popular tourist destination in Washington. In between lie Pennsylvania Avenue, the city’s most significant and ceremonial street, and the Federal Triangle, an important and architecturally significant precinct of government buildings and federal headquarters. To better integrate these aspects of the nation’s capital, the Framework Plan recommends the development of a mixed-use destination on Pennsylvania Avenue between 9th and 12th Streets at the current location of the Old Post Office Building and the J. Edgar Hoover Building.

Redesign of this area will provide the opportunity to incorporate green site and building technologies in new construction and to retrofit existing buildings. This will advance the federal government’s role as a leader in sustainability and enable agencies to meet recently implemented federal green energy standards.

**The Old Post Office** The magnificent Old Post Office building has not fully realized its potential as an anchor destination along Pennsylvania Avenue. Adaptive reuse would honor the Richardsonian Romanesque structure and make better use of its outdoor public space, thereby enlivening the area beyond the workday and contributing to the vitality of the public realm. Studies have indicated that most reuse scenarios would also require coordinated redevelopment of the adjacent annex. While the best use has not yet been determined for this important site, preliminary review indicates that the OPO building and Annex would support a combination of uses, such as a hotel, museum, restaurant, and event space.

If the Annex or its site were to be reused as a cultural institution operating separately from the OPO building, the Framework Plan recommends studying the feasibility of including the adjacent northern wing of the Internal Revenue Service Building in the new site. This would give the new institution a presence on Pennsylvania Avenue and entrances from the 11th Street plaza and the 10th Street arcade. If necessary, the displaced IRS functions could be incorporated into new construction on the annex site and connected to the main wing of the IRS building.

**The J. Edgar Hoover Building** If, in the long term, the FBI were better able to fulfill its mission in another building elsewhere in the District, redevelopment of the J. Edgar Hoover Building site or adaptively reusing the building would contribute significantly to the rejuvenation of Pennsylvania Avenue. This development would strengthen the avenue as an important thoroughfare, increase public activity on adjacent streets, and provide opportunities for commemoration. It could allow development of a well-designed, environmentally-efficient building and help modernize and humanize the federal workplace, increasing the

Reuse of the Old Post Office Building and redevelopment of the J. Edgar Hoover Building site with cultural, hospitality, commercial, and office uses can bring new urban vitality to Pennsylvania Avenue.

Current view of the Old Post Office Building located on Pennsylvania Avenue between the White House and U.S. Capitol.
efficient use of the site and contributing to downtown’s economic vitality.

If redeveloped, consideration should be given to configuring the site to reestablish D Street, thereby improving connectivity in the area. Federal office buildings with street-level public uses could fill the block north of D Street. The block south of D Street facing Pennsylvania Avenue could be reserved for a museum with a prominent public plaza on the avenue. The new buildings could be designed to green building standards and contribute to an energy cooperative. A green energy cooperative among federal agencies would allow new buildings designed to generate excess energy to share it with buildings whose historic nature restricts the installation of such technology.

10TH STREET CORRIDOR The 10th Street corridor, which bisects this proposed new hub of activity, is an important connection between downtown and the monumental core. It has the potential to become a vibrant mixed-use corridor near the Old Convention Center site and a popular tourist destination near Ford’s Theatre, as well as a major link to the Smithsonian’s National Museum of Natural History. It also functions as a Metrobus hub, serving the local employment base and providing a transfer point to bus routes and to four nearby Metrorail lines.

Enhancing the functional and aesthetic quality of 10th Street between Pennsylvania and Constitution Avenues would support the transformation of the area. Redesign of the area would improve walkability and pedestrian safety, and create an attractive and welcoming forecourt to the National Museum of Natural History. Improvements could also include streetscape redesign, street reconfiguration to allow one-way southbound traffic for buses only, and appropriately placed and designed Metrobus ticketing and information facilities. An additional Metrorail entrance at the Old Post Office plaza could support easy transit transfers, encourage transit use, and ease traffic congestion.

FREEDOM SQUARE AND PERSHING PARK At the western end of Pennsylvania Avenue, the buildings and parks should be improved to encourage more lively street activity. Freedom Plaza and Pershing Park should be redesigned to become a cohesive space and a primary destination for local and national events. Pershing Park could accommodate more restrooms and visitor services as well as a new indoor/outdoor garden pavilion offering food services. Freedom Plaza could serve as a primary civic square and incorporate amenities such as shade trees, seating, and interactive water features.

As private buildings north of the avenue are rehabilitated, they should be designed to reflect the dignity and prominence of the area they define. They should be programmed to increase the mix of uses, such as ground-floor retail and pedestrian amenities to encourage day and evening street life.

1. Reuse the Old Post Office Annex and the northern wing of the IRS building for a mix of hospitality and cultural uses.

2. Redevelop or adaptively reuse the J. Edgar Hoover Building site with a mix of federal offices, street-level retail, and cultural uses.

3. Redesign the 10th Street streetscape as a beautiful and welcoming forecourt to the National Museum of Natural History and a transit commuting center.

4. Improve Pennsylvania Avenue to increase street life, culture, commerce, and the beauty and quality of the public realm.

5. Improve pedestrian comfort and visitor services at Pershing Park and at Freedom Plaza and strengthen the plaza’s role as a premier civic space for the city of Washington.

6. Improve pedestrian access by adding two entrances to existing Metrorail stations.

7. Construct new buildings to the highest green building standards and develop a green energy cooperative to harvest renewable energy for use in historic buildings within the Federal Triangle.
Enhance the Public Realm

Each branch of government is represented along Pennsylvania Avenue, and many executive agencies are located in the adjoining Federal Triangle. As the country’s most important symbolic and ceremonial avenue and the center of the nation’s governance, this area should reflect the beauty of the nation’s capital and exemplify stability, vitality, accessibility, and stewardship. With its handsome buildings and marvelous civic art, the public realm along Pennsylvania Avenue and throughout the Federal Triangle has enormous potential as one of Washington’s premier destinations.

SUSTAINABLE STREETSCAPE Pennsylvania Avenue is a monumental avenue of great symbolic importance and a venue for nationally significant civic and ceremonial activities. However, as envisioned by the Pennsylvania Avenue Development Corporation, it should also regain some of its liveliness with the inclusion of commerce and culture alongside its government functions. It is also time to renew Pennsylvania Avenue’s streetscape, parks, and plazas and find ways to minimize the impact of perimeter security on the public realm.

A comprehensive solution is needed to encourage people to use Pennsylvania Avenue’s public spaces and to ensure aesthetic continuity and adequate pedestrian safety on the grand boulevard. The wide sidewalks, abundant outdoor spaces, and entry plazas should be enhanced with fountains, seating, improved landscaping, seasonal flowers, commemorative works, and public art. Sidewalk cafes, tasteful vending kiosks, seasonal activities, and community events could enliven nearby buildings and the avenue, contributing to a more memorable Washington experience. The entries of the buildings fronting the avenue, the forecourts to significant buildings, and the triangular spaces along the street should be improved. Appropriate lighting could accentuate the area’s art and architecture and significantly enhance the nighttime experience along the avenue.

In addition to minimizing the presence of perimeter security, redesign of the avenue should include green infrastructure and low-impact, sustainable design and maintenance practices to decrease the amount of impervious surface and allow for infiltration or harvesting of rainwater. The federal government and the city should take leadership roles to connect people to natural systems and a more pleasant pedestrian environment, and to capture, treat, and reuse stormwater. Synergies between these goals should be explored; for example, perimeter security, stormwater management, and pedestrian comfort all could be addressed with the construction of public realm bioswales, which would soften the urban streetscape and reduce stormwater runoff while establishing a security barrier. The ample building yards along Constitution Avenue could also support such an approach.

PUBLIC SPACES The intersections on 6th, 7th, and 12th Streets at Pennsylvania and Constitution Avenues should be redesigned to provide a safer and more pleasant pedestrian environment and to encourage walking. Other streetscape improvements could include additional street trees, better lighting, and useful, well-designed street furniture. In addition, the building plazas where north-south views terminate at major public buildings should be improved to be more welcoming, such as 6th Street at the National Gallery of Art, 8th Street at the National Archives, and 10th Street at the National Museum of Natural History. Other important locations that warrant improvement include Benjamin Franklin Circle on 12th Street, the proposed National Aquarium entrance on Constitution Avenue, and the Andrew Mellon fountain plaza on Constitution Avenue.

One of the most important ways to improve public space and support the national cultural institutions in
this area is to increase public access to and through the Federal Triangle. North-south connections through the Triangle should be enhanced and east-west connections should be reestablished. This can be accomplished by beautifying and programming the public space in a way that creates attractive and enjoyable outdoor spaces for workers and visitors to interact, relax, learn, and play. Preferably full, or at least limited, access should be provided through as many courtyards as possible. Rotating outdoor exhibits and public art displays could draw visitors into the plazas and courtyards, bringing life to these public spaces and improving pedestrian circulation.

Near the western end of the Federal Triangle, the Woodrow Wilson Plaza should be reanimated by adding a fountain and increasing seasonal activities beyond the existing summer afternoon concerts. The enormous basement food court of the Ronald Reagan Building and International Trade Center could be brought to the plaza level with well-designed kiosks and seating. Similarly, visitor services and entertainment venues, now located behind security checkpoints, should also be given a presence on the plaza to encourage street-level public activity. Extending visitor hours at the surrounding National Mall museums and organizing more public events in the evening would also increase public visitation in the immediate area.

**FEDERAL TRIANGLE HERITAGE TRAIL** The array of public art and architecture throughout the Federal Triangle could collectively be considered a museum of many parts, comparable to the institutions on the National Mall. Another way to improve the accessibility of the Federal Triangle is to weave together its parks, public spaces, and civic art with a flexible and easy-to-use trail. Self-guided or docent-guided tours, supported by state-of-the-art technologies, could offer a range of short and long walks along the avenues and through some courtyards. Where appropriate, agencies could use the courtyards to feature their missions. The interpretive trail could focus on a range of themes in American culture and history and bring them to life through sight and sound. The whole program could be supported by a prominent visitor center containing a bookstore, restrooms, exhibit space, and an information distribution point. The Federal Triangle Heritage Trail would enrich the visitor experience, provide a spontaneous learning opportunity for passersby, be a source of pride for workers, and help establish the Triangle as a destination unto itself.

1. **Establish a heritage trail to showcase agency missions, history, architecture, and art in the Federal Triangle.**

2. **Animate and increase visitor and worker services for year-round use of Woodrow Wilson Plaza.**

3. **Improve links between Benjamin Franklin Circle and the Old Post Office plaza.**

4. **Improve pedestrian sightlines and circulation at the intersections of 6th Street with Pennsylvania and Constitution Avenues.**
