Hello Jason:

Thank you for consulting with the DC SHPO regarding the proposal to temporarily relocate existing Verizon and T-Mobile Antennas on the roof of 1800 F St NW during the Phase 2 modernization of the building. Based upon our review of the materials submitted for both projects, we understand that some of the relocations will reduce the visibility of the antennas while others will increase the visibility slightly. However, since these relocations are only supposed to be in effect for approximately two years, we concur with GSA's proposed finding of "no adverse effect" conditioned upon consulting further prior to relocating the antennas back, if that is required. To that end, we also condition this finding of effect upon consulting further with GSA as part of the Phase 2 modernization project with a goal of identifying ways the proposed new construction might accommodate and better hide the existing antennas and any that may be proposed in the future. For example, might the penthouse of the existing eastern courtyard addition and the proposed penthouse of the newly proposed western courtyard addition be slightly expanded to conceal antennas more effectively? We look forward to consulting further regarding this matter. For future reference, our tracking numbers for these projects are 27-0062 (T-Mobile) and 27-0063 (Verizon).

Best regards,

Good afternoon Andrew,

I'm attaching our Section 106 submission for a proposed Verizon antenna project at the GSA Headquarters Building at 1800 F Street NW. The proposed project will relocate existing Verizon antennas from the north penthouses to the modern south mechanical penthouses.

GSA has determined the undertaking will have no adverse effect on the GSA Headquarters Building. I have attached

project drawings, a brief narrative, and photo-simulations of the proposed new antenna locations. Please let me know if you have any questions or need any additional information.

Sincerely,

--
